MANAGER'S REPORT

Jake Fitzgerald
Manager, West River/Lyman-Jones RWS

LEAD SERVICE LINE INVENTORY

I want to thank all of you who participated in the lead service line survey shared through our website, newsletters, social media, and billing inserts over the past few months. Those that participated are eligible to win a YETI cooler! Your feedback and participation greatly helped us as we worked to comply with the lead service line inventory requirements initiated by recent revisions within the federal Lead and Copper Rule regulations.

UPCOMING PROJECTS

In my last newsletter report, I mentioned that we are working with Sharpe Enterprises, Inc. of Ft. Pierre, SD, to construct a 300,000 gallon reservoir near Vivian and a 336,000 gallon reservoir near Creighton. Groundwork will begin soon, and the tanks are scheduled to be completed by the end of 2024.

Bids for 10.5 miles of water main were opened on June 28, 2023, and the WR/LJ Board of Directors awarded the project to Eatherly Constructors, Inc. of Leawood, Kansas, for \$1,289,150. Eatherly Constructors has successfully completed several large projects in the past for WR/LJ, and we look forward to working with them on this project. The pipeline improvements will include 4.5 miles of pipeline in northern Haakon County and 6 miles in Mellette County. The contract completion date for the pipeline project is October 31, 2024.

 **STATEMENT OF NON-DISCRIMINATION:** In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotope, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at http://www.ascr.usda.gov/complaint_filing_cust.html and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by: (1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410; (2) fax: (202) 690-7442; or (3) email: program.intake@usda.gov. This institution is an equal opportunity provider.

OFFICIAL NOTICE OF 34TH ANNUAL MEETING

**WEDNESDAY, OCTOBER 18, 2023
MURDO SHOP BUILDING – MURDO, SD**

Registration will be from 4:00 to 4:30 CT followed by a brief business meeting and door prizes.

Each membership will receive a \$10 water credit at registration.

WRLJ 2022 ANNUAL MEETING MINUTES (DRAFT)

The annual meeting of West River/Lyman-Jones Rural Water was held at the Philip Shop Building in Philip, South Dakota on Wednesday, October 19, 2022.

The Pledge of Allegiance was recited by those in attendance.

The meeting was called to order by President Dave Fuoss at 4:30 p.m. (MT) and a quorum was declared present.

Manager Fitzgerald read the annual meeting notice as published in the October 2022 newsletter and the local legal newspapers, and the official proof of mailing statement that indicated 1,872 newsletters were mailed from the U.S. Post Office at Madison, SD on September 30, 2022.

Manager Fitzgerald followed with introductions of WR/LJ Directors, staff and attorney.

The minutes of the October 20, 2021, Annual Meeting were published in the October 2022 issue of *Quality on Tap* newsletter that is mailed to all members. President Fuoss asked for a motion to approve the minutes. A motion was duly made and seconded to approve the minutes as mailed. Motion Carried.

Manager Fitzgerald presented the manager's report. He provided a system overview of annual water sales and water sources. He informed members of an ARPA Grant for \$1.2M and the SFR loan of \$2.8M. These

funds will be used to construct two reservoirs and 10.5 miles of pipeline improvements.

Guest speaker, Cheryl Chapman, PhD. PE, Executive Director of the Western Dakota Regional Water System (WDRWS) informed the members of their plan to eventually serve western SD where the population and water needs are both expected to double in the next century.

Jessica Hegge, Attorney for West River/Lyman-Jones Rural Water reported there are no pending lawsuits against WR/LJ and they are legally sound. A motion was duly made and seconded to approve Manager Fitzgerald and Attorney Hegge's reports. Motion Carried.

Attorney Hegge conducted the election of Directors and declared that, having no opposition, incumbent Directors David Fuoss – Zone 3A and Dean Nelson – Zone 5A were re-elected to the Board of Directors. A motion was duly made and seconded to cast a unanimous ballot. Motion Carried

President Fuoss called for old business. There was none.

President Fuoss called for new business. There was none.

There being no further business to address, President Fuoss adjourned the meeting at 5:00 p.m. (MT).

WRLJ NOTICE OF DIRECTOR VACANCIES

The West River/Lyman-Jones Rural Water Systems, Inc. in accordance with By-laws, Article VIII, Section I, hereby gives notice to its membership that the following seats upon the Board of Directors will be up for election at its Annual Meeting on October 18, 2023:

Zone 1 – Rural Stanley County north of the Bad River; current Director Dodie Garrity

Zone 2A – Rural Lyman County west of Township line between Range 75W and Range 76W; and rural Stanley County south of the Bad River; current Director Brad Smith

Zone 4 – Rural Pennington County east of the Cheyenne River; current Director Kirk Cordes

Zone 4A – Rural Mellette County; current Director Casey Krogman

ELIGIBILITY FOR NOMINATION:

1. Must be a member of the corporation
2. Must have contracted for a service tap in area to represent
3. Must file a petition no later than 4:00 P.M. (CT) October 6, 2023, at the rural water system office in Murdo, S.D.
4. Petition must be signed by no less than 15 members
5. No proxy voting allowed
6. Nominations will not be allowed from the floor at the annual meeting unless no petitions have been filed for a directorship

NOMINATING PETITIONS CAN BE ACQUIRED BY CONTACTING:

West River/Lyman-Jones RWS, Inc.
PO Box 407 • 307 Main St. • Murdo, SD 57559
Phone: 605-669-2931

Dodie Garrity

Brad Smith

Kirk Cordes

Casey Krogman

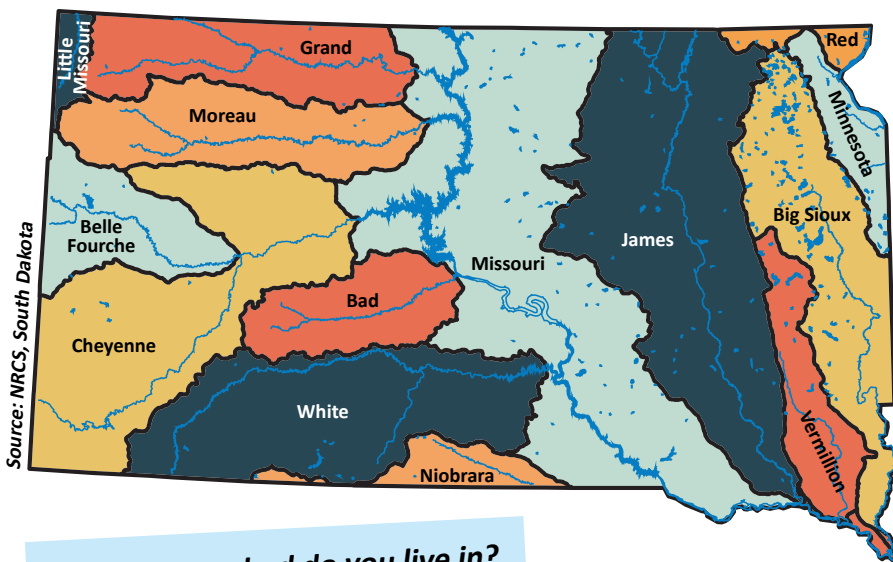

WE ALL LIVE IN A WATERSHED!

A watershed is a system of water that all comes together. For example, when it rains, you can often see little streams of water running along a street gutter or across a parking lot. These flow into larger streams and finally into puddles or sewage pipes or maybe even into a real stream or river. The watershed for the puddle or sewage pipe or stream, would include all of the small trickles and streams that flow into it, as well as all of the ground that they flow over!

MAJOR RIVERS OF SOUTH DAKOTA

MAJOR WATERSHEDS OF SOUTH DAKOTA

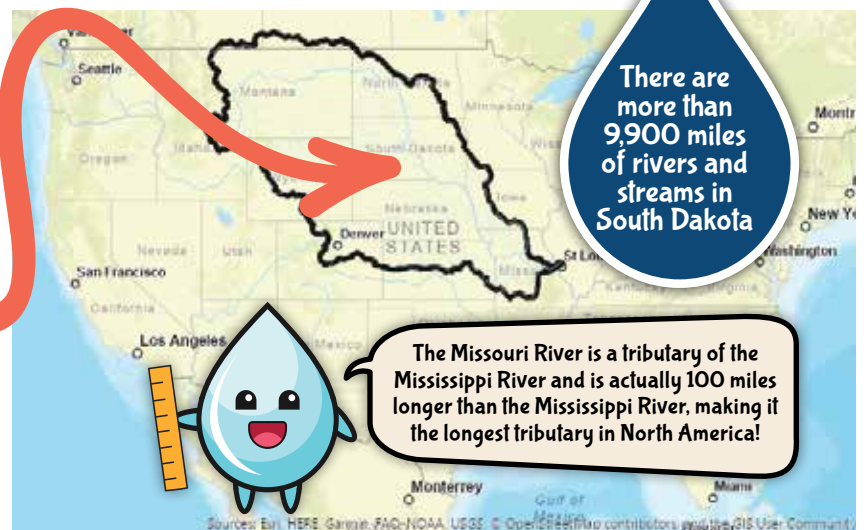

Check out the map above. How many major rivers do you see that run through South Dakota?

Looking at the map to the left, how many major watersheds cover South Dakota?

Which watershed do you live in?

Smaller watersheds come together to form larger watersheds. Most all of the watersheds you see in the map above, drain into the Missouri River, making up a larger Missouri River watershed.

The Missouri River watershed is a sub-watershed of the bigger Mississippi River watershed.

NOW IS THE TIME TO WINTERIZE!

A quick step outside and a glance at the calendar will remind you of the inevitable – colder temperatures are on their way. For South Dakotans, winter is just a way of life. Taking a little time and the proper steps to winterize your home – and especially your pipes – in preparation for the cold and snow, you can save yourself time and money, and unnecessary heartache.

A broken pipe can add up to big water losses. A 1/8 inch hole can lose 296,000 gallons of water over a three month period of time – about 3,200 gallons a day. That is equivalent to the amount of water that one person will use in a month of normal use. To put things into perspective – it is enough water to fill an 850 square foot basement with six inches of water in just 24 hours. Below are some steps you can take now to winterize your home and keep your pipes from freezing this winter.

Insulate your pipes

Pipes bursting in winter are a homeowner's worst nightmare. Insulate pipes in areas of your home that are not well heated – such as crawl spaces and attics. Wrap them with pre-molded foam rubber sleeves or fiberglass insulation – both of which can be found at your local hardware store. Another option can be to install heat tape – which is basically a special electrical cord that is wrapped around your pipes and emits heat. It is crucial to install UL-approved heat tapes according to manufacturer's instructions so as to not cause an accident or fire. The heat tape should be used on both the water pipes as well as the valves that shut off the water pipes. If you already rely on heat tape to keep your pipes from freezing, inspect it thoroughly to

make sure it is working properly as it can burn out after a number of years.

Know where your master shut off and service line valves are located

If there is an emergency, you will need to know where your master shut off valve is in a hurry. If your water meter is in your basement, the valve should be close by. Your service line water valve shuts off water to your entire property ahead of your water meter – and should be marked with a sign.

Inspect your meter pit

You can cover the pit with straw or other insulating material if desired to further protect the meter and pipes. Also remember to mark the location of your meter pit to avoid damage from snowplows and other equipment. If it looks damaged, contact your local rural water provider to come and check it out.

Disconnect outside hoses and faucets

It is very important to disconnect and drain your outside hoses. You should also drain your outside faucets by installing an inside shut-off valve and drain if the outside faucet is not self-draining. In-ground lawn sprinklers also need to be drained before winter hits.

Seal Outside Openings and Cracks

Locate places along outside walls, foundations, sill plates, doors and windows that may allow cold air to penetrate your home – and seal with caulk, foam or fiberglass insulation. Close any basement windows and access doors and make sure they are properly sealed.

OTHER WINTERIZING TIPS

- Clean your gutters! Gutters clogged with leaves and debris can form ice dams, which can cause water to seep into your house and cause damage. Also check to make sure your downspouts are carrying water away from your home's foundation to further prevent flooding or water damage.
- If you are going to be away from your

home for a long period of time, have your rural water system shut off your water.

- Keep sink cabinet doors open during cold spells or winter power outages to allow warm air to circulate around the pipes.
- Trim trees to prevent snow and ice from weighing them down and causing breakage – possibly damaging your home or vehicles.

WATER QUALITY & QUANTITY INFORMATION SOURCES

Many South Dakotans participate in a range of water-based recreational activities, like swimming, fishing or boating. For some, their home or cabin might be located adjacent to a lake or stream. For the rest of us, access comes by way of our many public parks and beaches. In any case, people are frequently asking questions about our surface water resources. The questions typically center on concerns over water quality (Is it safe?), but questions about quantity also arise (especially during times of flood or drought).

The references below are intended to provide links to a few of the available sources of water information where many the basic questions can be answered.

WATER QUANTITY INFORMATION SOURCES

USGS Stream Gages — The United States Geological Survey (USGS) maintains a network of over 170 stations that monitor stream flows across the state. In many instances, the records go back over fifty years, so they provide a good, long-term perspective. The stations record the river level (stage) on a continuous basis, and the readings can be accessed via the Dakota Water Science Center website at www.usgs.gov/centers/dakota-water. Click on Water Data for South Dakota under the DWSC column, then click

on Statewide Streamflow Current Conditions Table for the latest information on South Dakota rivers and streams.

Smart Phone Applications — In the past few years, smart phone applications have been developed that provide access to real-time stream flow information. The information they provide is similar to what is available from more formal, web-based platforms, i.e., real-time stream stage and discharge information. One example is a product called Rivercast™, developed by Juggernaut Technology, Inc., which is available for both Apple and Android platforms.

DANR Water Rights Lake Level Site — The South Dakota Department of Agriculture and Natural Resources (DANR) Water Rights Program maintains an interactive database map that provides information on lake levels within the state (Measured Lakes). The site provides water level data, along with established elevations for lake outlets and the ordinary high and low water marks. The site can be accessed by selecting “Data & Mapping” on DANR’s homepage at danr.sd.gov under the “Quick Links” heading.

WATER QUALITY INFORMATION SOURCES

Annual Consumer Confidence Reports — Every year, public water suppliers are required to provide a consumer

confidence report (CCR) to their customers describing the quality of the water they are providing. This requirement applies to rural water systems and municipal water utilities. This report typically comes out in the spring, with many rural water systems publishing their CCR in this magazine.

305(b) & 303(d) Integrated Report — Every two years, DANR publishes the Integrated Report for Surface Water Quality Assessment. Prepared under requirements of Sections 305(b) and 303(d) of the Federal Clean Water Act, the report provides a status report on the condition of rivers, lakes and streams across the state. The report identifies the designated beneficial uses of each water body, such as swimming, fisheries, or drinking water, along with a determination of whether the uses are supported. A variety of water quality standards have been established to determine whether a water body supports a particular use. If more than ten percent (10%) of samples fail to meet the standard, the water is considered impaired. Water quality data used in the biannual Integrated Reports come from a broad range of public sources. The most recent report can be found on the DANR website at: danr.sd.gov/OfficeOfWater/SurfaceWaterQuality/docs/DANR_2022_IR_approved.pdf

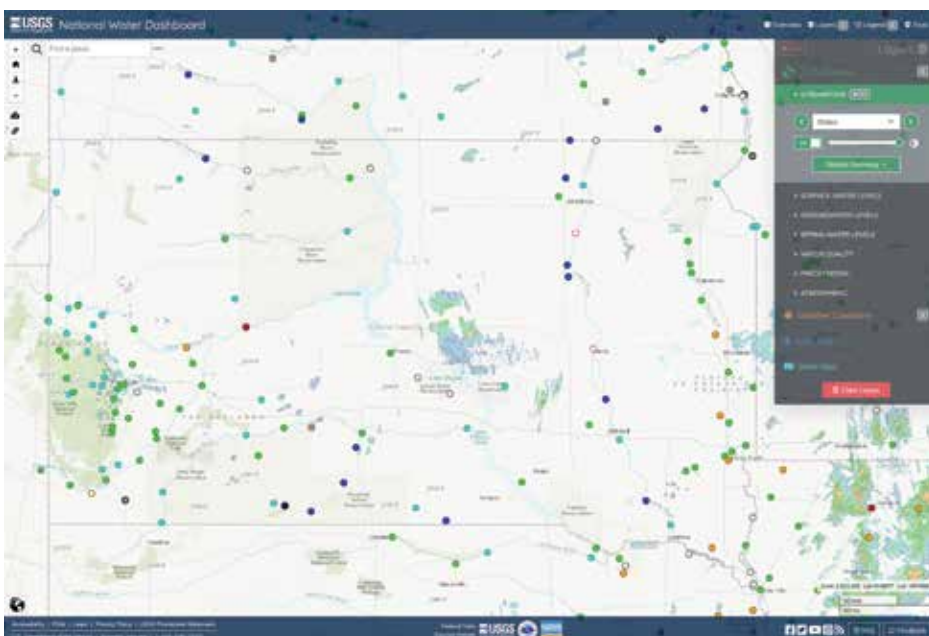

Water Quality Monitoring Access Portal — A few years back, DANR launched a new interactive database map providing the public internet access to water quality data for South Dakota's lakes and streams. This is the same data on which the Integrated Reports are based. The Water Quality Monitoring Access Portal Map (WQ Map) provides water quality data collected during the past 50 years from DANR's Statewide Water Quality Monitoring Network, intensive water quality monitoring surveys, Total Maximum Daily Load assessments, regional lake surveys, and citizen monitoring. Altogether, WQ Map contains data for over 3,600 water quality monitoring stations and includes results for more than 140,000 water chemistry samples, 2,500

algae samples, and 8,400 fish flesh samples. WQ Map can be accessed by selecting "Data & Mapping" on DANR's homepage at danr.sd.gov under the "Quick Links" heading.

The sources listed above are by no means all of the available resources, but they are some of the most commonly searched. It is also important to note that information is not likely to be available for every water body, and even if there is data, it may not be from exactly where you'd like. If you'd like

to learn more about potential sources of water quality and/or quantity data for your area, feel free to contact your local public water supplier, DANR, USGS or the East Dakota Water Development District at the numbers listed below.

■ **USGS Dakota Water Science Center** – 605-394-3200

■ **DANR Water Rights Program** – 605-773-3352

■ **DANR Surface Water Quality Program** – 605-773-3351

■ **DANR Watershed Protection Program** – 605-773-4254

By Mike McGill, Attorney At Law

UNDERSTANDING DIRECTOR LIABILITY FOR NOT-FOR-PROFIT CORPORATION BOARDS IN SOUTH DAKOTA

Navigating the intricacies of Director liability is crucial for individuals serving on the Board of Directors of a Not-for-Profit Corporation in South Dakota. While pursuing the mission of the organization, Directors must also be aware of potential risks and liabilities they may be exposed to. This article aims to shed light on the exposure to risk for Director liability under South Dakota law, ensuring board members are well informed and equipped to make informed decisions while conducting board business.

DUTIES AND OBLIGATIONS OF DIRECTORS

Members of a Not-for-Profit Corporation Board of Directors in South Dakota owe fiduciary duties to the organization and its stakeholders. Those duties encompass loyalty, care,

and good faith in the Board's decision-making processes. Directors must act in the best interest of the organization and avoid conflicts of interest that may compromise their impartiality.

LIABILITY FOR BREACH OF FIDUCIARY DUTIES

Directors can be held liable for breaching their fiduciary duties, which could result in legal consequences. South Dakota law recognizes two main types of actions against **Directors for breach of fiduciary duties:**

1. Derivative actions; and
2. Direct actions.

In a derivative action, filed by a patron or member representing the entity rather than themselves personally, the claim alleges harm to the organization by the Directors' actions or omissions. For example, if a Board of Directors fail to supervise the activities of management resulting in damage to the corporation regarding business operations, patrons may have a cause of action against the Board of Directors.

Direct actions, on the other hand, are filed by individuals personally harmed by a Director's breach of fiduciary duty, allowing them to seek remedies and damages directly. These claims require establishing a direct relationship between the Director's action and the individual's personal injury or loss.

Directors found to be in breach of their fiduciary duties can face various legal remedies, such as monetary damages and equitable relief. The courts may order Directors to reimburse funds misappropriated, prevent further harm by issuing injunctions, or even removing Directors from their position.

EXCULPATION PROVISIONS AND INSURANCE COVERAGE

If a board member served a Not-for-Profit Corporation under South Dakota law without receiving any compensation, they are immune from suit. However, most Water Systems compensate their Directors for expenses related to attending the meeting in addition to compensation for their services. In that case, where a Director is compensated, the Director is not entitled to absolute immunity for their actions under South Dakota law.

However, South Dakota law provides as follows with respect to indemnity of a Not-for-Profit Board Member:

SDCL 47-23-27 A nonprofit corporation may indemnify any person who was or is a party or is threatened to be made a party to any threatened pending or completed action, suit, or proceeding, whether civil, criminal, administrative, or investigative other than an action by or in the right of the corporation by reason of the fact that that person is or was a Director, officer, employee, or agent of the corporation, or is or was serving at the request of the corporation as a Director, officer, employee, or agent of another corporation, limited liability company, partnership, joint venture, trust, or other enterprise, against expenses including attorneys' fees, judgments, fines, and amounts paid in settlement actually and reasonably incurred by that person in connection with the action, suit, or proceeding if that person acted in good faith and in a manner that person reasonably believed to be in or not opposed to the best interests of the corporation and, with respect to any criminal action or proceeding, had no reasonable cause to believe such conduct was unlawful.

Essentially, a Director is entitled to indemnification from the non-profit corporation if they acted in good faith. This means that the Director adhered to a reasonable standard

of conduct in doing business for the corporation. South Dakota law does not define a standard of care for Directors and officers. However, based on the rules in other states the best guidance is for Directors to act in a manner the Director reasonably believes to be in the best interest of the corporation, to become and to remain informed of the business of a corporation to properly provide an oversight function of management, disclose any conflict of interest to other board members and management and to utilize the services of competent professionals with respect to accounting and legal affairs of the corporation. The Director should actively participate in board meetings, make sure management retains record keeping, investigate any warnings, properly manage real and personal property, and exercise independent judgment for the best interest of the corporation. The Director must avoid conflict of interest, self-dealing, and must maintain confidentiality of business affairs of the corporation.

Good governance practices also means that Directors must require that their entity implement a conflict-of-interest policy, require auditing the books of the corporation, utilize professionally managed investments, and to assure that tax returns are filed annually.

DIRECTORS AND OFFICERS LIABILITY POLICY

Moreover, Directors should consider securing adequate Director and Officers (D and O) liability insurance coverage. This insurance can help offset costs related to potential claims or damages arising from a breach of fiduciary duty. Careful review and consultation with legal professionals can ensure the insurance coverage is comprehensive and suited to the organization's needs.

The Directors and Officer's policy includes two types of protection. First, the insurance company has a duty to defend and provide attorney's fees to the company and the Board of Directors individually. Second, the insurance company has a duty to pay indemnity costs or damages for the lawsuit. In many cases the most important duty to implicate with respect to the insurance policy is the duty to defend because this includes the provision of an attorney and expenses of attorney's fees to investigate and defend the action. Many times that investigation leads to a settlement without the filing of suit as a result of mediation and compromise.

CONCLUSION

Serving as a member of Not-for-Profit corporation Board of Directors is a rewarding opportunity. However, it is crucial for Directors to understand and appreciate the exposure to risk for Director of liability under South Dakota law. By diligently fulfilling their fiduciary duties, adhering to ethical standards, considering exculpation provisions, and obtaining appropriate insurance coverage, Directors can significantly mitigate potential liabilities and contribute the growth and success of the organization.

SYSTEM SPOTLIGHT

SIOUX RURAL WATER SYSTEM

Rural residents of Hamlin, Codington and Deuel Counties in Eastern South Dakota joined together in early 1972 forming Sioux Rural Water Association. These areas were in need of a safe reliable water supply for household and livestock consumption. This region of South Dakota receives an average annual rainfall of about 20 inches with 16 inches falling during the crop growing season.

The engineering firm of DeWild Grant Reckert & Associates Co. (DGR) was engaged in March 1972 to perform a system feasibility study and preliminary design work. The study was financed by \$25.00 good intention fees collected from all association members. The feasibility study was completed late in September 1972 and indicated favorable conditions for developing the proposed water system. The Association's Board of Directors approved the study and directed the engineer to proceed with final design and preparation of Plans and Specifications. Following approval of the Association Board and funding agencies, successful bid lettings were held

Final construction cost for the original system was \$3,962,000 with 76% of this cost for construction of the distribution pipeline. Total project cost including legal, engineering and administrative cost is \$4,440,000. The cost was paid for by a partial grant and a 40-year construction loan from the Farmers Home Administration, a grant from the State of South Dakota, and by user membership fees. The cost of operation and repayment of loans will be made through water use revenues.

Projects and Upgrades

The 1979 User Add-on Project: After original system construction and continued requests for service, funding was secured and a few hundred new users became members of the Sioux Rural Water System.

1983 Water Source: A new water source was needed in Division II, so after a year of research a new well, pump station and storage at the Castlewood Pumping Station. Moreover, 12.5 miles of main line were added and the system began to serve the Town of Hayti.

1988 Phase I Construction: Deteriorating water quality became a priority prior to 1988, coupled with the system outgrowing portions of original design. These factors prompted the construction of 8.5 miles of main line, added storage, a new well at Castlewood and piping upgrades at the Sioux plant.

1990 Phase II Construction: Phase II constructed two water filtration plants and 20.3 miles of main line piping with treatment plants located at the Castlewood well site and the Sioux well site. Plant improvements remedied issues caused by iron and manganese found in raw water sources.

1991 User Add-on (Phase III): Sioux Rural Water System obtained 130 new members through an expansion project. The project was engineered and designed to provide water to individuals experiencing a lack of water or poor water quality.

1996 Well Relocation / System Upgrade: Nitrate contamination required Sioux to look for a new water source. A year-long search culminated in the purchased 60 acres of land near existing wells by the Castlewood Treatment Plant (Division II). Additional efforts, along with the help of surrounding land owners, created a wellhead protection area. Furthermore, the project included the implementation of a SCADA control systems allowing operators to monitor and control the system remotely.

1999-2000 User Add-on Project: Continued requests for water to areas miles away from other water systems prompted a study of those areas. The process identified 150 new members system wide and another mainline expansion.

in May and September 1972, and June 1975. Construction work began in the fall of 1974 with work essentially complete by early fall of 1976.

At that point, the Sioux System served 632 members at 670 pipeline connections; that number has grown to 1,728 members. Projected water use for the system is approximately 500,000 gallons per day or over 180 million gallons per year; 373,493,000 gallons were pumped in 2022. Ninety percent of the potential users with the system's service area who joined the Association are receiving water. The System has a density of 1.8 connections per mile of pipe, with approximately 1,400 miles of pipe in the ground.

SIoux RURAL WATER SYSTEM

2009 Office Project: In 2009 Sioux Rural Water constructed a new office near the original office at the Sioux Treatment plant location. The construction of this efficient building will adequately meet Sioux Rural Water's needs for years to come.

2015 Water System Improvement Project: Construction of approximately 31 miles of new distribution system pipeline and individual meter services in Kranzburg. One existing booster pumping station will be replaced due to equipment being made obsolete by distribution system changes.

The City of Kranzburg distribution system will be improved with 14,950 feet of pipeline and appurtenances size 3-inch through 6-inch, and with new service pipelines and meter pits. The 72 existing customers of the City of Kranzburg water utility will be customers of Sioux Rural Water, and the City will no longer operate a water utility.

Additionally, two new wells and accessories will be constructed at the Castlewood wellfield to replace declining capacity in existing wells. The obsolete water system SCADA control system will be replaced.

2018 Water System Improvement Project: SRWS staff is installing 1,700 automatic read meters (AMR) in the system. Approximately 9 miles of 3"-10" distribution pipeline and a new pump station was installed at the Kones Reservoir to improve system pressure and delivery flows. There was also a new control vault installed at the Hazel Tower site.

The City of Hazel was changed from a bulk customer to individual rural water customers. Meters were replaced and isolation valves were installed at each service. Some water pipeline improvements were made to the city distribution system.

Both the Sioux and Castlewood Water Treatment Plants had major upgrades. New electrical rooms, office and lab space, chemical feed rooms, filter cells, and other miscellaneous equipment to both treatment plants. Water Treatment capacity was increased from 500 gpm to 750 gpm at the Sioux WTP and from 900 gpm to 1,500 gpm at the Castlewood WTP. New larger generators were installed at both Water Treatment Plants.

Hazard Mitigation: Our Kones Reservoir and Hayti Boosters both have backup generators thanks to our past manager pursuing funding through FEMA.

2023 Water System Improvement Project: The foundation has been dug at the Bryant Tower site for a new 300,000 gallon water tower. This new 300,000 gallon tower will replace the 50,000 gallon water tower on the existing Bryant Water Tower site along with the 50,000 water tower at the Hazel Tower site. Approximately 14 miles of 4" – 10" distribution pipeline will be added in this project.

The City of Castlewood and the City of Estelline are in the process of becoming bulk water users of Sioux Rural Water System Inc.

17. Hot dish
18. Fall ground cover

RULES: Use the colored squares in the puzzle to solve the word scramble above. Call your Rural Water System (See page 2 for contact information) or enter online at www.sdarws.com/crossword.html with the correct phrase by October 15, 2023 to be entered into the \$100 drawing.

Only one entry allowed per address/household. You must be a member of a participating rural water system to be eligible for the prize. Your information will only be used to notify the winner, and will not be shared or sold.

Congratulations to Kay Zeigler with Mid-Dakota RWS who had the correct phrase of "In summer, the song sings itself" for October 2023.

RURAL WATER

ACROSS SOUTH DAKOTA

CITY OF MADISON NEARS FULL INTEGRATION WITH LEWIS & CLARK REGIONAL WATER

By Zac Zwaschka, Madison Daily Leader

Madison's integration into the Lewis & Clark Rural Water System (L&C) is on its home stretch, and according to L&C Executive Director Troy Larson, residents can expect the city to be fully connected by around this time next year.

Madison — along with 19 other member cities across South Dakota, Iowa and Minnesota — joined L&C more than 30 years ago, and with Madison being one of the last to be incorporated, this is a welcome completion to a lengthy project.

Larson explained that there are three items remaining for Madison's integration, all of which are making significant progress. Among these are two 16-mile segments of 16-inch diameter PVC pipe that will connect Madison to the broader L&C system.

"Both of them expect to be substantially complete by the end of this year," Larson said, adding that between the two, nearly 90% of piping has been placed.

Construction on these segments began in April and May, respectively, with Halme Construction of Lake Norden handling the southern end and Carstensen Contracting of Dell Rapids working to the north.

On top of this, Larson said that additional pumps will be needed to ensure the water flows smoothly to its destination.

"We're adding pumps to a pump station just a mile west of Crooks that is needed to get the water pumped up to Madison. That contract is progressing very well, and we expect that it will hopefully be completed in the next couple months," Larson added.

The final item is a million-gallon ground storage reservoir to be built east of Madison's Water Sanitation Plant. Construction on the reservoir kicked off in May, and Larson said that it's set for completion in August of next year.

Larson described the reservoir as the "final piece of the puzzle," as its completion date will signify Madison's full

integration with L&C.

Once completed, the L&C system will deliver 44.19 million gallons per day (gpd) to its 20 members from an aquifer adjacent to the Missouri River, which is pumped to a treatment plant near Vermillion. From this total, Madison is slated to receive a million gpd.

Madison has technically been receiving water since 2017 via a wheeling plan where Madison receives water from the Big Sioux Community Water Corporation (BSCWC), who purchased it from the Minnehaha Community Water System (MCWC).

While this wheeling plan has helped Madison maintain its water needs over the last half-decade, it was always meant to be temporary.

Part of the reason Madison's integration has taken so long is L&C's reliance on federal funding for 80% of the project's costs, with the other 20% being evenly divided between the member cities and states they inhabit.

Larson explained that at times, federal funding was "minimal at best, leading to small, incremental progress." However, a recent surge in federal spending has resulted in a boost of efficiency, as L&C has a record 17 active contracts throughout its service area.

This is an all-time high for L&C, and Larson noted that previously, three to four consecutive contracts was the best they could hope for.

"Fortunately, we've seen an influx of funding, and that's really helped us make a push to get to the finish line," he added.

Madison's integration into the original project is a critical milestone, as water of increased quality and quantity will finally be available to residents. As completion nears and expansion plans gain momentum, further information will be forthcoming.

THANK YOU NOTES

Dear West River Lyman Jones Rural Water,

I am grateful for your support over the years! I am extremely grateful for you guys selecting me as a recipient of your scholarship. This scholarship will allow me to pursue a degree that will set my future up for success!

Matthew Birkeland
Jones County School District

Dear West River Lyman/Jones Rural Water,

I would like to thank you for choosing me to be a recipient of your scholarship. In the fall I will be pursuing a degree at Dakota Wesleyan University for Elementary Education. This scholarship will help me to pay for my tuition, books, housing, etc. I am very honored to accept this award. Thank you again!

Sincerely,

Abby Wyly
Stanley County School

WR/LJ,

Thank you very much for my selection of your scholarship. It will really help me next year in paying for school at Dakota Wesleyan University, where I will study business.

Sam Hand
Philip High School

IS YOUR CONTACT INFO UP TO DATE?

If you have changed your landline, cell phone, or email address, please let us know. This will make it easier to contact members directly for water outages and high flow alerts.

Please email wrlj_ruralwater@goldenwest.net, call 800-851-2349 or fill out the form below and mail it to PO Box 407, Murdo, SD 57559. Thank you!

DANR RECOGNIZES WEST RIVER/LYMAN-JONES FOR DRINKING WATER COMPLIANCE

The South Dakota Department of Agriculture and Natural Resources (DANR) announced that the West River/Lyman Jones public water system and the system's certified operators have been awarded a Drinking Water Certificate of Achievement Award. The award is for outstanding water system operations and environmental compliance with state drinking water standards for the past year.

"Access to safe and reliable water sources is essential to keeping our families safe and our economy growing," said DANR Secretary Hunter Roberts. "This award is a testament to the hard work and dedication of South Dakota's drinking water system operators and their efforts to ensure their customers have access to clean drinking water."

The system's operations specialists are Jake Fitzgerald, Michael Vetter, Ed Venard, Brandon Kinsley, Eddie Dartt, John Kramer, Steven Baker, Nicholas Konst and Brian Flynn.

To qualify for the Drinking Water Certification of Achievement Award, public water systems and their system operations

specialists had to meet all of the compliance monitoring and reporting requirements, drinking water standards, and certification requirements for 2022.

FREE SERVICE

WR/LJ provides two free trips each calendar year to shut off/ turn on water at locations that will not be in use for a period of time. Please give advance notice by calling the main office in Murdo a couple days prior, so our field staff can make arrangements.

In observance of the following holidays, WR/LJ Rural Water offices will be closed on the following days:

October 9, 2023 – Native American Day

November 23, 2023 – Thanksgiving Day

November 24, 2023 – Day after Thanksgiving

In case of an emergency, please call the Murdo area at 530-0932 or the Philip area at 530-1136 for assistance.

PAYMENT OPTIONS

1. **Online Payment:** Go to www.wrlj.com (accepts Visa, MasterCard, Discover and Electronic Check)
2. **Pay-By-Phone:** Call 1-855-325-8898 to use our automated bill payment option.
3. **Pay-By-Phone:** Call 1-800-851-2349 and a WR/LJ customer representative will take your payment information over the phone.
4. **Electronic Direct Payment:** Your payment is automatically deducted from your checking or savings account on the 10th of each month.
5. **US Mail:** Mail payment along with the bottom portion of your bill.
6. **Pay-in-Person:** During regular business hours you may bring your payment to our office.
7. **24-Hour Drop Box:** Available at the Murdo office near the main entrance.

For forms or more information on these payment options, please call 1-800-851-2349.

WATER MATTERS

Observation Wells

Driving around rural South Dakota, it is not uncommon to see a piece of plastic pipe sticking out of the ground in the road ditch. Most (hopefully) will be flanked by a couple of steel fence posts and some will have a cap secured with a padlock. Sometimes the pipe is encased in a steel housing. These are ground water observation wells, and they are used to monitor the nature and condition of the aquifers on which we all depend.

Most observation wells are used to measure the water level over a period of time. During times of drought or high demand, water levels will drop. When use declines, or when precipitation replenishes the aquifer, water levels rise. The overall goal is to insure that water use does not exceed the aquifers capacity. The Water Rights Program within the South Dakota Department of Agriculture and Natural Resources (DANR) maintains a network of over 1,550 observation wells across the state for this purpose.

By comparing the water levels across an aquifer, it is possible to determine the direction of water movement. If a public water supplier knows where its water comes from, it can develop protection strategies and programs.

Observation wells can also be used to monitor the quality of the water in an aquifer. Such wells might assess conditions in the area around a known contamination event, or simply monitor long-term conditions and trends. The Statewide Ground Water Quality Monitoring Network, maintained by the DANR Geological Survey Program, monitors 25 critical shallow aquifers across the state.

If you see a well that is in poor condition, or if you just have questions about what the well might be used for, you can contact the following entities:

DANR Geological Survey Program, (605) 677-5227
